## EC Declaration of Conformity to: Medical Device Directive 93/42/EEC

<b>Legal Manufacturer:</b>	Keeler Ltd Clewer Hill Road, Windsor, Berkshire SL4 4AA United Kingdom
<b>Manufacturing Site(s):</b>	Keeler Ltd Clewer Hill Road, Windsor, Berkshire SL4 4AA United Kingdom
<b>Device Description/Family:</b>	Direct Instruments & Accessories (See below Product Schedule)
<b>EC Product Classification:</b>	Class I, Annex IX, Rule 10
<b>GMDN:</b>	<p><b>46786 Type P- Direct Ophthalmoscope, battery-powered</b> A battery-powered, hand-held, ophthalmic instrument designed to examine the interior of the eye allowing the examiner to clearly see the details of the retina and other structures/media (cornea, aqueous, lens, and vitreous). It consists of a built-in light source that is directed by the examiner through the pupil to illuminate the interior of the eyeball, a mirror with a single view hole, and a dial containing several lenses of different powers that can be alternated by the examiner while viewing. It produces an upright, or unreversed, image of about 15 times magnification. Batteries are housed in the instrument's handle; supplemental devices (e.g., spare light bulbs) may be included.</p> <p><b>46787 Type P – Direct Ophthalmoscope, line-powered</b> A mains electricity (AC-powered), hand-held, ophthalmic instrument designed to examine the interior of the eye allowing the examiner to clearly see the details of the retina and other structures/media (cornea, aqueous, lens, and vitreous). It consists of, a built-in light that is directed by the examiner through the pupil to illuminate the interior of the eyeball, a mirror with a single hole through which the examiner will view, and a dial containing several lenses of different powers that can be alternated by the examiner whilst viewing. It produces an upright, or unreversed, image of approximately 15 times magnification. The power is run through a transformer to reduce this to low-voltage.</p> <p><b>32712 Type P – Retinoscope, battery powered</b> A battery-powered, hand-held, ophthalmic instrument that is used to measure the refractive errors of the eye through the projection of a beam of light into the eye, and the observation of the movement of the illuminated area on the retinal surface and of the refraction of the emergent rays. The batteries may be of the rechargeable type, and are housed within the handle of the instrument. Also known as a skiascope and the method as sciascopy.</p> <p><b>46784 Type P – Retinoscope, line-powered</b> A mains electricity (AC-powered), hand-held, ophthalmic device that is used to measure the refractive errors of the eye through the projection of a beam of light into the eye, and the observation of the movement of the illuminated area on the retinal surface and of the refraction of the emergent rays. The current power is run through a transformer for reduction to low-voltage. Also known as a skiascope and the method as sciascopy.</p> <p><b>12849 Type P – Otoscope, direct</b> A portable, battery-powered, hand-held device (non-endoscopic) primarily designed for examination of the outer ear canal and tympanic membrane (eardrum) by direct viewing through the ear opening. The device consists of a handle that contains the batteries (which may be rechargeable), a built-in light to illuminate the interior of the ear canal, and a detachable cone-shaped tube (the speculum) that is inserted in the ear canal. In some cases a moderate air pressure may be applied. Supplemental devices (e.g., additional specula, spare light bulbs) may be included. This is a reusable device.</p>
